Ecommerce Revenue Key Insights

Overall High-Level Performance

Total Sales (Volume): The store sold a total of 5,615 items.

Total Orders: Customers placed 500 unique orders.

Total Revenue: The business generated 432K (around \$432,000) in revenue.

Average Order Value: On average, each order brought in about 863.00.

Geographic & Product Insights

Top City: Indore is the clear leader in sales volume (1,084), comfortably outperforming major hubs like Mumbai (727) and Pune (329).

Top Products: Printers (\$58K) and Bookcases (\$57K) are your heavy lifters driving the highest total revenue.

Bottom Products: Skirts (\$1.9K) and Leggings (\$2.1K) are the lowest-performing sub-categories, indicating low demand or poor inventory traction

Quick Strategic Recommendations

Double down on Electronics: Invest more marketing budget here since it easily beats its goals.

Review Clothing Targets: The clothing targets might be unrealistically high, or the inventory needs a refresh to fix the \$34K deficit.

Investigate Indore: Figure out what is driving the massive success in Indore and try to replicate that playbook in Mumbai and Delhi.

Sales vs. Target (Where We Succeeded & Missed)

The Big Winner: Electronics is the standout category. It brought in the highest revenue (\$165,267) and smashed its target by \$36,267.

The Major Miss: Clothing generated decent revenue (\$139,054) but missed its ambitious sales target by a significant \$34,946. Furniture slightly missed its target by \$5,719.

Overall: The entire business just barely missed its total revenue target by a minor margin of \$4,398 (underperforming by about 1%).

4. Revenue Trends Over Time

There is a massive, record-breaking revenue spike toward the end of the timeline (around Jan 2019/early 2019), peaking at \$13.5K in a single day, which likely indicates a major seasonal holiday sale or clearance event

Ecommerce Profit Key Insights

Overall Financial Performance

Total Profit: The business generated a Total Profit of 24K over the 2018–2019 period.

Profit Margin: The overall profit margin stands at 5.55%. This is exactly at the midpoint of the gauge chart (which ranges from 0 to 11.10%), indicating stable but modest profitability.

Year-over-Year Growth: Profitability saw a massive surge in 2019. In 2018, the business recorded a net loss of -1,799, which completely turned around in 2019 with a major profit of 25,754.

Customers Insights

Top 5 Star Customers: A small group of customers is driving a massive chunk of your profits. Seema (1,970) and Abhijeet (1,562) are your top two profitable clients, followed by Priyanka, Abhishek, and Sarita.

Action Item: These are your VIP customers. Implementing a loyalty program or targeted retention offers for them ensures this high-value revenue stream doesn't churn.

Category & Product Performance

Top Category: Clothing is the primary profit driver, contributing nearly half of the total profits (46% or 11K). Electronics follows closely at 43% (10K), while Furniture has the smallest share at just 9.59% (2K).

Sub-Category Stars: Within the product breakdown, Printers and Bookcases are the highest-earning sub-categories, while items like Handkerchiefs and T-shirts contribute the least to the bottom line.

Geographic Concentrated Growth:

The map visual indicates that sales and profits are heavily concentrated within India. Expanding deeply into the highest-performing states before trying to diversify globally seems to be the current successful strategy.

Daily Performance Trends (Variance Analysis)

The Variance This Year Vs Last Year by Day chart gives a highly granular look at daily performance across a standard 30-day monthly cycle:

Mid-Month and End-of-Month Spikes: There are massive positive profit spikes around Day 11-13, Day 21-23, and Day 25. This strongly correlates with standard corporate salary cycles (mid-month and end-of-month), where consumer spending power is at its peak.

The Day 18 Drop: There is a noticeable negative variance (a dip below the 0K line) right around Day 18. This represents a consistent monthly dead-zone where expenses might outweigh sales.

Action Item: To smooth out this dip, you could run targeted "Mid-Month Flash Sales" or special promotional campaigns around Days 16–19 to incentivize buying during the monthly slump.
